

Sarah Monod

Software Engineer @ Python Infrastructure & Data Processing

Summary

Software engineer with nine years at Bloomberg across Python infrastructure and data processing in New York and London. My work spans infrastructure used by 9,000+ engineers, day-one production support for new Python releases, and pipelines processing millions of time series.

Bloomberg

Software Engineer

2017–Present · 9 years
New York & London

Python Infrastructure & Developer Experience

New York

- Coordinated **hundreds of teams** to remove **five end-of-life interpreters company-wide**, with upgrades every six months that improved developer experience and reduced security and regulatory risk.
- Integrated a security-by-default authentication and authorization library into a C++ extension serving **9,000+ engineers**, with **no user code changes**.
- Delivered **day-one production support** for upstream Python releases four years running.
- Created a web application to automatically upgrade repositories to newer Python versions.
- Maintained Memray, the go-to Python memory profiler (used in CPython’s memory benchmark suite), and PyStack, a Python and native stack inspector for running processes and core dumps.

Public Speaking, Teaching & Mentoring

New York, PyCon US

- Delivered technical talks and classes as a subject matter expert and teacher.
- Taught engineers how to use AI agents and introductory machine learning (ML 101), including training their own models.
- Organized an internal software engineering course and mentoring program.
- Organized Bloomberg open-source sprints at PyCon US for four consecutive years.

Data Processing & Acquisition

London

- Designed and deployed reusable components processing millions of time series.
- Turned an initial COVID data ingestion workflow into a production-grade pipeline in less than 10 days.

Engineering Skills

Engineering & Delivery

Agile development, product ownership, collaborative design, automated testing, business value

Python internals

CPython C API, Python-C/C++ interoperability, native extensions

Systems

Distributed systems, microservices, data pipelines

Data

Comdb2, Kafka, MySQL, Oracle, document databases

Languages

Python, C, C++, Go

Education

Georgia Institute of Technology

MS, Computer Science · Machine Learning

2016–2017 · Dual degree

INSA Lyon

Engineering Degree, Computer Science

2013–2017 · Dual degree

Paris Descartes

Two-year Computer Science Degree · 2011–2013

Earlier Experience

Coorpacademy · Data Science Intern 2016 · Paris

Built a TensorFlow recommendation engine and Spark streaming analytics pipeline.

Google · Reliability Engineering Intern 2015 · Dublin

Automated recovery from MySQL data drift in large-scale production.

Altran & SAP · Software Engineering Internships 2013–2014

Worked on semantic deep learning and scalable processing with HBase.

Languages & Community

Native language

French

Fluent languages

- English
- German
- Spanish

Additional language study

- Mandarin Chinese
- Italian

Community teaching

Taught children free weekly coding classes through Code Club at a local library.
